# EVO Compatibility Overview

EVO systems provide the highest level of protection for banks, military and government sites, luxurious residential homes and any place where maximum security is essential. These systems are designed to be easy to use and their modular concept provides installers with work-saving features that make expanding, installing and servicing them quick and convenient.

Expand your system by adding plug-and-play expansion modules anywhere and in any combination on the 4-wire EVO bus. Modules are connected to the bus at the most convenient location and then their zone inputs are assigned to the desired zone and partition. Also, only a module's used inputs are assigned to zones in the system. Keyswitches, remote controls and unused module inputs do not use up zones. Once installed, all bus modules, including motion detectors, can be programmed remotely via a keypad or via the BabyWare PC software.

EVO integrates powerful access control solutions, enabling your alarm system database to manage access to up to 32 doors, and monitor their access from inside any partition. You can use BabyWare and NEware to manage permissions for all users and access. By merging security and access control, EVO increases your security system protection to an unprecedented level.
